OBJECTIVE

B.Tech **4th Year**, Computer Science (Data Science specialization) student graduating 2027, with hands-on SQL, DSA Using Python, and Power BI experience across end-to-end analytics and AI Data Engineering Projects. I'm a Google Data Analytics Professional Certification Holder.

EDUCATION

- **B.Tech** Computer Science and Engineering with Specialization in **Data Science**, at Manipal Institute of Technology (MAHE), Bengaluru, Karnataka, India. 2023 - 2027
CGPA : 7.48

SKILLS

- Languages & DB Python | SQL (MySQL & PostgreSQL).
- ML/DL Frameworks TensorFlow | PyTorch.
- Tools/Platforms Excel | Power BI | Jupyter | Databricks | dbt | GitHub | Snowflake | AWS | Apache Airflow.
- Core Skills EDA | Statistical Analysis | Data Visualization | Feature Engineering | Machine Learning.
- Soft Skills Communication | Critical Thinking | Problem-Solving | Teamwork.

PROJECTS

- **E-Commerce Customer Behavior Data Analysis** | [GitHub](#)
Tech - Python (Pandas, NumPy, Matplotlib, Scikit-learn) | Excel | SQL(PostgreSQL) | Power BI | Jupyter Notebook.
 - Built a Python/PostgreSQL/SQL pipeline cleaning **3,900 transactions** and answering **10 business questions** via aggregation, CASE WHEN, and window functions.
 - Found non-subscribers drove **73%** of **\$233,081** in revenue despite equal spend to subscribers, visualized in an interactive Power BI dashboard behind 5 data-backed recommendations.
 - Extended the analysis with logistic regression and K-means clustering — caught a 2-feature data-leakage bug before validating a **0.469 ROC-AUC** result, and surfaced a **984-customer segment** missed by existing rule-based tiers.
- **Food-Tech AI Data Engineering** | [GitHub](#)
Tech Python | SQL | Snowflake | dbt | Apache Airflow | AWS S3 | Docker
 - Engineered an end-to-end **ELT pipeline** ingesting **10M+** orders, **23M+** order items, and **300K** customer reviews (**2.3 GB**) from AWS S3 into Snowflake via COPY INTO and a keyless **IAM** storage integration, eliminating stored credentials.
 - Designed a medallion architecture (RAW/STAGING/MARTS) in dbt with 7 staging models, 4 dimensions, 2 incremental fact tables, and 4 business marts covering revenue, restaurant performance, and delivery **SLA metrics**.
 - Optimized execution with incremental MERGE materialization, processing only new records instead of rebuilding **10M+** row facts, and enforced data quality through automated dbt tests that fail the pipeline before defects reach consumption.
 - Orchestrated the full ingestion-to-consumption flow as a scheduled Airflow **DAG** on Docker, and built three **LLM** applications in Python and Streamlit — review enrichment, **RAG**, and **text-to-SQL** with SELECT-only validation and role-based access.

EXPERIENCE

- **Vice-Chair / ACM SIGSOFT MITB**, Student Chapter | **(Technical/Non-Technical)** Nov 2025 - Present
Coordinated the planning and execution of technical workshops, hackathons, and chapter events while managing student volunteers and logistics. Organized 6 corporate-sponsored hackathons in collaboration with industry partners, delivering impactful technical experiences for students. Bengaluru, India.
- **NSS MITB / Operational Head** | **(National Service Scheme)** | **(Non-Technical)** | [View](#) Jan 2025 - Feb 2026
Oversaw the planning and execution of a one-week Winter Camp and 7 social impact events, coordinating volunteers, logistics, and partnerships to deliver successful community initiatives. Bengaluru, India.

ACHIEVEMENTS & LEADERSHIP

- **Winner – Atos SRIJAN Hackathon 2026**. | **(Technical)** | [LinkedIn](#) | [Certificate](#)
AI-Agent Based Release Testing System (Team ARC) - Under the Digital Workplace theme, developed an AI-driven autonomous testing solution for end-to-end release validation.
